

Your Partner in Excellence

Regulatory/Safety Data Sheet (SDS) Service

SDS Management (Business)

PRYMEC prepares and keeps SDS (outbounds) up to date for the chemicals you place on the market (through import, manufacturing, and in some cases trade), for internal use and shipment to your local and international customers.

In addition to managing the SDS (inbounds) received from your suppliers, PRYMEC also keeps them up to date.

SDS Management with SAP (IT)

PRYMEC creates and updates the basic data of your SDS, installs and supports the EHS and RD modules in your SAP system, including the integration of EHS into all HR and SCM IT processes. Like this, regulatory updates can be propagated through the existing SDS, and the updates can be shipped automatically to the clients.

You benefit from a decreased workload, reduced risk of facing expensive penalties, and diminished costs. Furthermore, you act legally compliant to avoid prosecutions and reputational damage.

Please do not hesitate to **contact us** for more information. We look forward to supporting your business!
